

Empathy map

Use this framework to develop a deep, shared understanding and empathy for other people. An empathy map helps describe the aspects of a user's experience, needs and pain points, to quickly understand your users’ experience and mindset.

Build empathy

The information you add here should be representative of the observations and research you've done about your users.

Says

What have we heard them say?
What can we magine them saying?

Thinks

What are their wants, needs, hopes, and dreams? What other thoughts might influence their behavior?

The major cause of emission of CO2 is plastic and there requires a quick analysis.

We are looking forward for a healthy environment through this project.

Human plays a major role in CO2 emission.

If emission goes on like this ,there will be no oxygen for us to live.

How can your project pave the way for a change in the growing temperature?

Can this project find a solution to reduce the CO2 emission?

Your project seems to cause a global revolution, doesn't it?

But, Will this project manipulate human beings to stop the activities that incite carbon emission?

Through this analysis with the data of all places, we hope that there would be an emission of limited amount of CO2 .

Let's give our involvement to the project as it is concerned with our environment.

May be,this project helps the scientists to move further towards things that they are unaware of .

Despite the fact that humans can't bring an end to this problem ,this analysis does.Impossible

This project is merely about dataset and not a pollution controller.

This analysis exposes the human's ill treatment towards nature in an unfussy way

Your project focuses on people whose role as an emittors of CO2 with their vehicles and builders of pollutants, in all countries around the world.

Nothing doubtful that the problems would be solved through this project.

Does

What behavior have we observed?
What can we imagine them doing?

Feels

What are their fears, frustrations, and anxieties? What other feelings might influence their behavior?
